Barrow County Board of Commissioners contracted with Engineering Management, Inc. to plan, design and permit a project consisting of approx. 17,000 linear feet of sewer line, two wastewater pumping facility and other associated appurtenances. This project will collect wastewater from an industrial/ commercial economic development district in Auburn and transport it to the County's wastewater treatment facility near Highway 316.

The original project was developed to accommodate a major employer near Auburn. The project was completed 25% under budget. The remaining funds were used to leverage an Appalachian Regional Commission Grant to expand the project to accommodate five additional new businesses and assist in retaining two existing businesses.
